Ready to handle all ticketing situations including barcodes and RFiD programming

Now App based — and all Apps are inclusive.

systems

All your tickets in all these colours!

Tickets for admission, events, cloakroom tickets with 2, 3 and 4 parts, self adhesive luggage tags, waterproof wristbands, barcodes and RFiD programming

£25.00

Q-printer operates Apps for different ticketing purposes, all with full cash register functionality

entry

This App allows for the management and print out of tickets and wristbands in any admission situation. Multiple keyboard templates, number of on-screen buttons, colours etc can be edited and saved. Unlimited number of articles and prices. Sales statistics include gender and/or age split. Several ticket types can be used, as well as add-on Apps for e-Ticketing, integration with turn stiles, capacity monitoring, smoker pass-out and other time limited tickets. Several Q-entry can be networked to provide an overview of attendances and admissions.

robe

The well known industry benchmark for cloakroom ticketing and management is now App based. Any cloakroom, small or large, benefits from the organisation Q-robe brings. Very good quality tickets in 2, 3 or 4 parts, high speed of handling, essential revenue control and functions for individual data to be entered for each item ensures a profitable operation without lost items or tickets. Organises coat hangers on a rail or fixed hooks on the walls equally well. Additional Apps for mobile recognition and e-Tickets, photos of garments stored and CCTV links. Several Q-robe can also be networked to issue numbers in the correct sequences.

event

Sell event tickets in advance. Set up by number of tickets available and expiry date. The system can handle any number of events consecutively, each with several different ticket prices and types. Full daily cash reconciliation. Generate e-Ticket barcodes, print barcodes, program RFiD chips embedded in tickets with security details or put monetary values for cash less handling. The Q-printer can be networked to import ticket data from external sources.

E-ticketing

This add-on works with any of the Apps, and allows for the scanning of pre-booked tickets, verification against ticketing databases and the print out of event or admission tickets. Requires an established link to external ticketing databases. Can also be used to identify electronic cloakroom tickets, product discounts and other events.
